PROFILE

AI Native, Backend-focused PHP engineer with six years of experience building and maintaining production systems.

EDUCATION

B.S. Computer Science Engineering — John von Neumann University

EXPERIENCE

Software Engineer — LastPass Inc. | EPAM Systems Kft

Mar 2026 – Present

Remote

I've accelerated both my AI-driven and Agile development capabilities. My focus has been on AI tooling, system reliability, and actively shaping technical roadmap planning through structured refinement and architectural ownership.

- Worked on a unified communications micro-service that replaced legacy email dispatching. The system centralizes outbound messaging via SendGrid with an extensible architecture designed to support additional communication providers in the future. This increased code readability, reduced a single file from 6500 lines to around 500 and greatly reduced development time on communication related topics.
- Contributed to core functionality for LastPass's newly introduced VPN project.
- Contributed to the User entitlement engine, which greatly increased efficiency, reduced database calls by 75% and gave a single source of truth.

Software Engineer — Eclick Apps Kft

Mar 2023 – Dec 2025

Remote

- Designed and maintained relational database schemas, making trade-offs around performance, data integrity, and long-term maintainability
- Built and documented REST APIs with automated test coverage using unit and feature tests
- Implemented multi-tenant architectures, background jobs, real-time features, and administrative panels for production systems
- Set up and maintained CI/CD pipelines using GitLab, and managed deployments via Laravel Forge and Docker
- Reviewed code and provided technical feedback to maintain consistent quality and shared best practices
- Worked closely with stakeholders to translate business requirements into reliable technical solutions

Software Engineer — Sunday Kft

Mar 2021 – Jan 2023

Remote

- Developed and maintained Laravel-based applications supporting real business workflows in logistics and delivery
- Designed and implemented REST APIs consumed by internal tools and third-party services
- Automated complex reporting, invoicing, and PDF generation workflows, reducing manual processes

PROJECTS

LastPass / UCP

The universal communications platform for LastPass, replacing legacy email sending across the whole PHP codebase and multiple sub-services.

LastPass / User Entitlement Engine

The user entitlement engine is the single source of truth for getting a user's credentials. It reduced redundant database / API look-ups by 75%.

LastPass / VPN

LastPass's all new VPN tier.

Intergavel

<https://intergavel.com/>

Large-scale online auction platform with complex business logic around bidding, invoicing, and Document generation. Designed backend workflows, administrative tooling, and automated testing To support a high volume of transactions.

Merchstore.hu

Multi-tenant e-commerce platform enabling rapid setup of customized webshops. Implemented Tenant isolation, order processing, and payment and shipping integrations, balancing flexibility With operational simplicity and a centralized administrative dashboard.

SmartCar

<https://smart-car.hu/>

Multi-tenant platform connecting car owners with repair shops. Implemented quoting, booking, Subscriptions, and online payments through a role-based administrative interface.

Form builder

Highly customizable, multi-tenant form management system supporting complex validation rules, Dependent fields, multilingual content, and multiple delivery methods (API, embedded, self-hosted Pages).

CPI Club

<https://cpiclub.hu>

Coworking space and service booking platform integrated with third-party scheduling apis, Supporting rentals, memberships, and discounts.

SKILLS

AI: Claude Code, Claude skills, agentic workflows

Back-end Development: PHP, Laravel, Symfony

Testing & Static analysis: Pest, PHPUnit, PHPStan, Rector

Front-end Development: Livewire, Tailwind, Filament, Blade, Twig, Bootstrap, JavaScript

Devops: Gitlab pipelines, python scripts
